Released September 2019

List of Abbreviations

ABI – Acquired Brain Injury

ACL – Administration for Community Living

CPAP – continuous positive airway pressure

HSRI – Human Services Research Institute

LTSS – Long-Term Services and Supports

MCO – Managed Care Organization

N – Number of respondents

N/A – Not Applicable

NASUAD – National Association of States United for Aging and Disabilities

NCI-AD™ – National Core Indicators for Aging and Disabilities®

OAA – Older Americans Act

ODESA® – Online Data Entry Survey Application

PACE – Program of All-Inclusive Care for the Elderly

SPSS – Statistical Package for Social Sciences

TBI – Traumatic Brain Injury

Service Coordination.....35

Table B13. Proportion of people who know whom to contact if they want to make changes to their services...35

Table B14. Proportion of people who can reach their case manager/care coordinator when they need to (if know they have a case manager/care coordinator)35

Table B15. Proportion of people whose paid support staff show up and leave when they are supposed to36

Table B16. Proportion of people who have an emergency plan in place.....36

Table B17. Proportion of people who want help planning for their future service needs.....37

Table B18. Proportion of people whose services meet their needs and goals.....37

Table B19. Proportion of people whose case manager/care coordinator talked to them about services that might help with any unmet needs and goals (if have unmet needs and goals and know they have a case manager/care coordinator).....38

Table B20. Proportion of people who have a backup plan if their paid support staff do not show up.....38

Care Coordination39

Table B21. Proportion of people who stayed overnight in a hospital or rehabilitation facility in the past year (and were discharged to go home or back to where they live)39

Table B22. Proportion of people who felt comfortable and supported enough to go home (or back to where they live) after being discharged from a hospital or rehabilitation facility in the past year39

Table B23. Proportion of people who had someone follow up with them after being discharged from a hospital or rehabilitation facility in the past year.....40

Table B24. Proportion of people who know how to manage their chronic condition(s) (if have chronic conditions).....40

Access.....41

Table B25. Proportion of people who have transportation when they want to do things outside of their home (non-medical)41

Table B26. Proportion of people who have transportation to get to medical appointments when they need to 41

Table B27. Proportion of people who receive information about their services in the language they prefer (if non-English).....42

Table B28. Proportion of people who have, need, need an upgrade or do not need grab bars in the bathroom or elsewhere in their home.....42

Table B29. Proportion of people who have, need, need an upgrade or do not need bathroom modifications (other than grab bars)43

Table B30. Proportion of people who have, need, need an upgrade or do not need a specialized bed43

Table B31. Proportion of people who have, need, need an upgrade or do not need a ramp or stair lift in or outside their home44

Table B32. Proportion of people who have, need, need an upgrade or do not need a remote monitoring system44

Table B33. Proportion of people who have, need, need an upgrade or do not need a personal emergency response system.....45

Table B34. Proportion of people who have, need, need an upgrade or do not need some other home modification(s).....45

Table B35. Proportion of people who have, need, need an upgrade or do not need a walker.....46

Table B36. Proportion of people who have, need, need an upgrade or do not need a scooter46

Table B37. Proportion of people who have, need, need an upgrade or do not need a wheelchair47

Table B38. Proportion of people who have, need, need an upgrade or do not need hearing aids47

Table B39. Proportion of people who have, need, need an upgrade or do not need glasses.....48

Table B40. Proportion of people who have, need, need an upgrade or do not need a CPAP machine.....48

Table B41. Proportion of people who have, need, need an upgrade or do not need some other assistive device(s).....	49
Safety.....	50
Table B42. Proportion of people who feel safe at home	50
Table B43. Proportion of people who feel safe around their paid support staff.....	50
Table B44. Proportion of people who are ever worried for the security of their personal belongings	51
Table B45. Proportion of people whose money was taken or used without their permission in the last 12 months	51
Table B46. Proportion of people with concerns about falling or being unstable	52
Table B47. Proportion of people with concerns about falling or being unstable who had somebody talk to them or work with them to reduce the risk.....	52
Table B48. Proportion of people who are able to get to safety quickly in case of an emergency like a house fire	53
Health Care.....	54
Table B49. Proportion of people who have gone to the emergency room for any reason in the past year	54
Table B50. Proportion of people whose emergency room visit in the past year was due to falling or losing balance	54
Table B51. Proportion of people whose emergency room visit in the past year was due to tooth or mouth pain	55
Table B52. Proportion of people who can get an appointment to see their primary care doctor when they need to	55
Table B53. Proportion of people feeling sad or depressed who have talked to someone about it in the past 12 months	56
Table B54. Proportion of people who have had a physical exam or wellness visit in the past year	56
Table B55. Proportion of people who have had a hearing exam in the past year	57
Table B56. Proportion of people who have had a vision exam in the past year.....	57
Table B57. Proportion of people who have had a flu shot in the past year	58
Table B58. Proportion of people who have had a dental visit in the past year	58
Table B59. Proportion of people who have had a cholesterol screening in the past 5 years	59
Wellness.....	60
Table B60. Proportion of people whose health was described as poor, fair, good, very good, or excellent.....	60
Table B61. Proportion of people whose health was described as having gotten better, staying the same, or getting worse compared to 12 months ago.....	60
Table B62. Proportion of people reported to have been forgetting things more often than before in the past 12 months	61
Table B63. Proportion of people who have discussed their forgetting things more often than before with a doctor or a nurse.....	61
Table B64. Proportion of people reported to have a chronic psychiatric or mental health diagnosis.....	62
Table B65. Proportion of people who never/almost never, not often, sometimes, or often feel sad or depressed	62
Table B66. Proportion of people reported to have chronic condition(s)	63
Table B67. Proportion of people whose hearing was described as poor, fair or good (with hearing aids, if they wear any).....	63
Table B68. Proportion of people whose vision was described as poor, fair or good (with glasses or contacts, if they wear any)	64
Table B69. Proportion of people who consider themselves to have a physical disability	64
Medications	65
Table B70. Proportion of people who take medications that help them feel less sad or depressed	65

Table B71. Proportion of people who understand what they take their prescription medications for (if take prescription medications)	65
Rights and Respect.....	66
Table B72. Proportion of people whose paid support staff treat them with respect	66
Table B73. Proportion of people whose permission gets asked before others enter their home/room (if in group setting)	66
Table B74. Proportion of people who are able to lock the doors to their room if they want to (if in group setting)	67
Table B75. Proportion of people who have enough privacy where they live (if in group setting)	67
Table B76. Proportion of people whose visitors are able to come at any time (if in group setting)	68
Table B77. Proportion of people who can use the phone privately whenever they want to (if in group setting)	68
Table B78. Proportion of people who have access to food at all times of the day (if in group setting)	69
Table B79. Proportion of people whose mail or email is read without asking them first (if in group setting)	69
Self-Direction of Care.....	70
Table B80. Proportion of people who are participating in a self-directed supports option (as defined by the State – data derived from administrative records)	70
Table B81. Proportion of people who can choose or change what kind of services they get	70
Table B82. Proportion of people who can choose or change how often and when they get services	71
Table B83. Proportion of people who can change their paid support staff if they want to	71
Work.....	72
Table B84. Proportion of people who have a paying job in the community	72
Table B85. Proportion of people who would like a job (if not currently employed)	72
Table B86. Proportion of people wanting a job who had someone talk to them about job options	73
Table B87. Proportion of people who do volunteer work	73
Table B88. Proportion of people who would like to do volunteer work (if not currently volunteering)	74
Everyday Living	75
Table B89. Proportion of people who generally need none, some, or a lot of assistance with everyday activities (such as preparing meals, housework, shopping, or taking their medication)	75
Table B90. Proportion of people needing at least some assistance with everyday activities who always get enough of that assistance when they need it.....	75
Table B91. Proportion of people who generally need none, some, or a lot of assistance with self-care (such as bathing, eating, or moving around their home).....	76
Table B92. Proportion of people needing at least some assistance with self-care who always get enough of that assistance when they need it	76
Table B93. Proportion of people who have access to healthy foods when they want them	77
Affordability.....	78
Table B94. Proportion of people who ever have to skip a meal due to financial worries	78
Control	79
Table B95. Proportion of people who feel in control of their lives.....	79
Table B96. Ranking of how important health is to people (out of health, safety, being independent, and being engaged with community and friends)	79
Table B97. Ranking of how important safety is to people (out of health, safety, being independent, and being engaged with community and friends)	80
Table B98. Ranking of how important being independent is to people (out of health, safety, being independent, and being engaged with community and friends)	80

Table B99. Ranking of how important being engaged with community is to people (out of health, safety, being independent, and being engaged with community and friends)81

NCI-AD™: Background

This section gives an overview of the NCI-AD program

Overview of the National Core Indicators for Aging and Disabilities©

The National Core Indicators for Aging and Disabilities© (NCI-AD™) is an initiative designed to support states in assessing the performance of their long-term services and supports (LTSS) programs and delivery systems for older adults and adults with physical disabilities. NCI-AD's primary aim is to collect and maintain valid and reliable data that give states a broad view of how their publicly funded LTSS impact the quality of life and outcomes of service participants. Since 2012, Human Services Research Institute (HSRI) and the National Association of States United for Aging and Disabilities (NASUAD)¹ have worked in collaboration to build, implement, and manage NCI-AD.

Data for the project are gathered through yearly in-person NCI-AD Adult Consumer Surveys administered by state agencies to a sample of at least 400 individuals in each participating state. Survey populations include older adults and adults with physical disabilities (including Acquired or Traumatic Brain Injury (ABI/TBI)) accessing publicly-funded services through the Older Americans Act (OAA), Program of All-Inclusive Care for the Elderly (PACE), Medicaid, and/or state-funded programs.

One of the most valuable features of the NCI-AD program is the involvement and commitment of participating states. NCI-AD states are extremely involved in the planning and execution of the project in their state. While the NCI-AD project team assists participating states in all phases of preparation and implementation, states must identify key staff to take part in monthly technical assistance calls and carry out various responsibilities associated with the project. When states decide to join the NCI-AD program, they commit to project planning at the state level, stakeholder engagement, preparing a random sample of LTSS consumers to be surveyed, conducting the NCI-AD Adult Consumer Survey with a specified number of participants, adhering to project protocols, providing project-compliant data to HSRI for analysis, and reviewing draft reports for accuracy.

States face a multitude of challenges in LTSS delivery. Some of these challenges include blending multiple funding streams to serve a growing number of participants in home and community-based and institutional settings. One of the main objectives in developing NCI-AD was to obtain information about state services provided across the spectrum of publicly

¹ NASUAD is the membership organization for state aging and disability directors.

funded LTSS, regardless of specific funding source or service setting, thus allowing for comparisons across states and across programs. NCI-AD provides data-driven information about the performance of states' LTSS systems and the effect these systems have on social determinants of health and the quality of life of service recipients. This unique perspective cannot be found in other available tools—most of which address Medicaid-funded services only or measure compliance with Medicaid standards, count the number of service units provided or, at best, assess service-specific outcomes.

Development of the NCI-AD tool was supported by NASUAD members, with some supplementary funding from the Administration for Community Living (ACL).

Psychometric Properties

The NCI-AD Adult Consumer Survey has undergone psychometric validation studies during development and pilot stages and is a valid and reliable tool. For more information, please see reports from the Final Pilot and the first (2015-2016) year of the program, both available on the NCI-AD.org website.

Survey Methodology

This section describes the protocol for administering the NCI-AD Adult Consumer Survey, including sampling criteria, administration guidelines, and surveying training and procedures.

Administration

Proxy Respondents

A key principle of NCI-AD is the importance of gathering information directly from consumers. Information for the In-Person Survey of NCI-AD is collected via a face-to-face conversation with the person receiving services (or their proxy, if needed). The indicators are meant to apply to all eligible consumers, regardless of characteristics such as level of disability or age. NCI-AD administration protocols dictate that every person randomly selected into the sample is given an opportunity to respond (no one is prescreened out or predetermined to be unable to participate).

The NCI-AD Adult Consumer Survey does allow for the use of proxies in some circumstances. By excluding proxy responses, a certain group of service recipients (most of whom are unable to respond due to cognitive or other types of limitations) would be unrepresented in the data. Thus, the NCI-AD program protocols stipulate that proxy respondents are allowed, though only for a subset of more objective questions and only in situations where the service recipient themselves either could not provide valid responses or chose to have a proxy respondent assist or answer on their behalf.

Studies have found the greatest discrepancies between service recipient and proxy responses occur when the information being collected is subjective (i.e., related to how the individual feels, which means proxies would be aware of the correct answers only if the service recipient had previously expressed their feelings)². Questions relating to observable behaviors tend to have higher levels of agreement.

The use of proxy respondents for the NCI-AD Adult Consumer Survey is limited to a subset of more objective questions, which relate to observable and/or measurable events or circumstances. Questions in the Survey that pertain to personal experiences and that require subjective responses may only be answered by the service recipients themselves and do not allow for proxy responses.

NCI-AD protocols require that surveyors first attempt each interview directly with the individual receiving services. Only after meeting with the service recipient and attempting

² Magaziner, Jay, Sheryl Zimmerman, Ann L. Gruber-Baldini, J. Richard Hebel, and Kathleen M. Fox. "Proxy Reporting in Five Areas of Functional Status Comparison with Self-Reports and Observations of Performance." *American Journal of Epidemiology* 146.5 (1997): 418-28.

the interview can the surveyor make the determination that a proxy respondent is needed. That determination is made based on the way the service recipient answers the first set of survey questions. NCI-AD protocols do not allow for a proxy determination to be made based on a phone conversation or relying on someone else’s input.

The service recipient may be able to answer most questions in the survey but request the help of a proxy assistant intermittently for some of the survey questions. In this case, the Full In-Person Survey is used. Specific items that allow for proxy assistance are identified through the Full Survey; each of these items tracks whether a proxy provided the answer, as well as the relationship of the proxy to the service recipient. If both the service recipient and the proxy respondent answer a question, the service recipient’s answer is recorded so long as that answer is deemed reliable by the interviewer. Non-proxy items in the Full Survey are asked only of the service recipient themselves.

If the surveyor makes the determination that a proxy is needed for the entirety of the survey, a Proxy Version of the Adult Consumer Survey is used to conduct the interview. Figure 5 below indicates how often the Proxy Version was used in 2017-2018 data collection cycle in each state.

Figure 5. Proxy Version: Frequency of Use by State

State	Proxy Version Used
CO	13%
DE	16%
GA	14%
IN	11%
KS	6%
MN	19%
MS	9%
NE	26%
NJ	27%
NV	7%
OH	10%
OR	11%
TN	32%
TX	18%
VT	18%
WI	7%
Overall	16%

NCI-AD aims to increase the validity and reliability of proxy responses by training and emphasizing to interviewers that only those people who know the service recipient well (family, friends, certain staff, etc.) should serve as proxy respondents. To avoid conflict of interest, case managers are generally not allowed to respond as proxies.

Interviewer Training

States employ a variety of individuals to conduct the face-to-face interviews for the NCI-AD Adult Consumer Survey. To avoid conflict of interest, surveys cannot be administered by the consumer's service provider, their case manager, a relative, or other close contact. Given this constraint, states generally use private contractors or state quality assurance staff to conduct the surveys, though they may in some cases use universities, advocacy organizations, and/or peer interviewers.

HSRI and NASUAD project staff provide a mandatory one- to two-day on-site interviewer training to all new states enrolling in the project. The goal is to provide a standardized training to ensure uniform application of the survey. The training generally takes place no more than a month prior to when the interviews are scheduled to start.

Trainings consist of an overview of the project, a detailed review of the survey tool; general and population-specific surveying techniques; guidance for follow-up in the case of unmet needs and/or abuse, neglect or exploitation; and mock interviewing practice sessions. The process for entering and submitting survey data is also reviewed. All trainees are given standardized materials to be used during the training itself, as well as for reference when conducting the surveys.

Returning participating states are asked to identify one or more lead trainers, responsible for ongoing refresher training of returning surveyors and full training of any new surveyor staff. HSRI and NASUAD train all lead trainers for their role and provide them with all necessary standardized training materials.

Criteria for Exclusion of Responses

All consumers selected into the survey sample are given an opportunity to participate in a face-to-face interview. There are no prescreening procedures. Exclusion of responses occurs at the time of data analysis, based on whether the interviewer indicated that the answers were provided in an invalid and/or inconsistent way (as recorded in the Interviewer Feedback Form). There is no minimum threshold number of answers given for

a survey to be included for purposes of analysis. For example, if a respondent wished to discontinue participation half way through the survey, the surveyor would simply thank the respondent for their time and conclude the visit. Unless the surveyor indicated otherwise, the responses given by the respondent would still be analyzed.

Sampling

Each state is instructed to complete a minimum of 400 surveys with a random sample of older adults and adults with a physical disability who are receiving at least one publicly funded service beyond case management. A sample size of 400 ensures a high confidence level and relatively narrow margin of error (approximately 95% confidence level and 5% margin of error) for the state estimate, regardless of how large the service population is in the state. A 95% confidence level and a margin of error of +/-5% is mandatory for each state's sample to be included in this report.

Most states chose to conduct the survey with a sample larger than 400. The oversampling is usually done by funding program to obtain stable results for each program (in addition to the state estimate). This allows the state to draw conclusions about populations within those programs and make comparisons between them. Other sampling strategies have included oversampling by region, managed care organization (MCO), and racial/ethnic group.

The NCI-AD project team works with each state to design and track its sampling strategy and then construct appropriate analysis (including analysis weights). Whether the sampling is done from an overall service population (i.e., simple random) or individually by program, region, or other strata (i.e., stratified random), the state must always adhere to the guidelines of selecting survey participants randomly from among the pool of eligible service recipients. Furthermore, the NCI-AD project team works with each state to define program populations (or other strata populations) in such a way that they do not overlap.

Data Analysis

This section explains statistical methods used to analyze the NCI-AD Adult Consumer Survey data. It includes a description of how data are weighted to account for disproportionate program sampling within states and for disproportionate representation of states' populations and sample sizes in the overall survey data. It also includes an explanation of risk-adjustment used in reporting some of the outcomes.

Data Management and Analysis

HSRI coordinates the NCI-AD Adult Consumer Survey data management and analysis. Most states enter data into an online data entry system specifically designed for the purposes of this project (ODESA®). HSRI staff subsequently download the data into an SPSS data file. This data file is then “cleaned” (reviewed for completeness and compliance with standard NCI-AD formats) and invalid responses are eliminated. Files from individual states are merged into a single SPSS file. The merged file from 2017-2018 data collection cycle was used for all analyses in this report.

Below is a summary of the statistical procedures used to analyze 2017-2018 NCI-AD Adult Consumer Survey data.

Collapsing Responses

For many of the outcomes in this report, only “yes” responses are analyzed and reported for state-to-state comparisons. However, there are several items for which the “yes” responses were collapsed with the middle responses (for example, a “sometimes” response, or an “in-between” response) to form binary variables for analysis and subsequent reporting. Appendix A contains the collapsing and recoding rules. Unless otherwise stated, “don’t know” and unclear/refused responses were excluded. Un-collapsed data with all response options, including “don’t know” and unclear/refused/no response categories, shown by state can be found in Appendix B.

Weights

Many of the states proportionally oversampled one or more of their programs—that is, a particular program constituted a larger proportion of the sample than it did as proportion of the population receiving services. To account for some programs being proportionally over-represented in state samples and program categories, statistical weights were developed and applied when estimating state averages and category averages. Weights were developed using the sample proportions and the true population proportions of each program included for analysis within the state.

Similarly, the overall NCI-AD Average and the overall program category averages are also weighted averages—that is, their calculations take into account each state’s sample size as well as the size of the state’s population eligible to be included in the survey sample. The weights that each state contributes to the calculation of the overall NCI-AD and overall

program category averages are proportional to the population served eligible to be included in the survey in that state (and taking into account the state's sample size).

The NCI-AD project team works with each individual state at the onset of data collection to define program populations in such a way that they do not overlap, and to determine and track the size of the population of service recipients in each of the state's program who were eligible to be included in the survey. These population numbers, together with corresponding sample numbers, are then used to calculate the various sets of weights for analysis.

For exact calculations of all sets of weights, please contact the project team.

Risk-adjustment

Outcome adjustment or "risk-adjustment" is a statistical process used to control for differences in the individual characteristics of people interviewed across states. This procedure allows for more valid state-to-state comparisons by effectively "leveling the playing field." It is necessary to perform this analysis to account for the fact that, for example, states have different eligibility definitions for services and may serve recipients with different characteristics. Only those indicators that are likely to be affected by these characteristics were adjusted. For example, for a person with limited mobility who is older, it may be more difficult to participate in community activities. On the other hand, such characteristics should not affect whether a person has friends or staff who are respectful to him/her.

The indicators were risk-adjusted using the following 15 characteristics: age, gender, race, rurality, living arrangement (whether the person lives in his/her own home versus somewhere else), whether the person lives alone, mobility, amount of assistance needed for everyday activities, amount of assistance needed for self-care, overall health, level of hearing, level of vision, presence of a mental health diagnosis, whether the person has been forgetting things, and whether the Proxy version of the survey was used. Items that were adjusted are labeled as such throughout the tables in the Results section of Part I of the report, and the state-by-state unadjusted results can be found in Appendix B.

Outcome adjustment was performed using logistic regression. This statistical analysis produced a predicted value that one would expect to observe given the individual's characteristics. The state's average observed rate (i.e., the state average prior to risk-adjustment) was adjusted by the average predicted rate to produce the risk-adjusted rate

for the state. As a result of this procedure, differences in adjusted indicators reflect true state differences rather than differences due to the demographic or characteristic make-up of state service populations. Similarly, the state's program category's average observed rate was adjusted by that state's program category's average predicted rate to produce the risk-adjusted rate for each state program category.

Appendices

Appendix A: Rules for Recoding and Collapsing Responses

Table A1 below details collapsing rules for recoding survey items with three or more response options into binary variables used for analysis. The table also specifies which Results tables in Part 1 (“Section II: Outcome Tables and Comparisons Across States”) of this report contain recoded items, as well as their associated NCI-AD domains. Unless otherwise stated, “Don’t Know” and “Unclear/Refused/No Response” (and, where relevant, “Not Applicable”) are excluded. For frequencies of “Unclear/Refused/No Response” and “Don’t Know” responses by state, see tables in Appendix B.

Table A1. Outcome Variables – Collapsing Rules

Domain	Item	Table #	Collapsing Logic
Community Participation	Proportion of people who are as active in the community as they would like to be	20	Collapse “No” and “Sometimes”
Choice and Decision Making	Proportion of people who get up and go to bed when they want to	24	Collapse “Some days, sometimes” and “No, never”
	Proportion of people who can eat their meals when they want to	25	Collapse “Some days, sometimes” and “No, never”
	Proportion of people who are able to furnish and decorate their room however they want to (if in group setting)	26	Collapse “In most ways” and “Only in some ways, or not at all”
Relationships	Proportion of people who are always able to see or talk to friends and family when they want to (if there are friends and family who do not live with them)	27	Collapse “Most of the time, usually, or some family and/or friends” and “No, or rarely”
Satisfaction	Proportion of people who like where they are living	29	Collapse “In-between, most of the time” and “No”
	Proportion of people who would prefer to live somewhere else	31	Collapse “Yes” and “Maybe”
	Proportion of people who always or almost always like how they spend their time during the day	33	Collapse “Some days, sometimes” and “No, never”
	Proportion of people whose paid support staff change too often	34	Collapse “Yes” and “Some, or sometimes”

Domain	Item	Table #	Collapsing Logic
	Proportion of people whose paid support staff do things the way they want them done	35	Collapse “Some, or usually” and “No, never or rarely”
Service Coordination	Proportion of people who know whom to contact if they want to make changes to their services	36	Collapse “Not sure, maybe” and “No”
	Proportion of people who can reach their case manager/care coordinator when they need to (if know they have a case manager/care coordinator)	37	Collapse “Most of the time, usually” and “No, or only sometimes”
	Proportion of people whose paid support staff show up and leave when they are supposed to	38	Collapse “Some, or usually” and “No, never or rarely”
	Proportion of people whose services meet all their needs and goals	41	Collapse “No, not at all” and “Some needs and goals”
	Proportion of people whose family member (paid or unpaid) is the person who helps them most often (if someone provides support on a regular basis)	46	Collapse “Paid family member or spouse/partner” and “Unpaid family member or spouse/partner”
	Proportion of people who have a family member (paid or unpaid) providing additional assistance (if someone provides support on a regular basis)	47	Add proportions: “Paid family member or spouse/partner” and “Unpaid family member or spouse/partner”
Care Coordination	Proportion of people who felt comfortable and supported enough to go home (or back to where they live) after being discharged from a hospital or rehabilitation facility in the past year	49	Collapse “No” and “In-between”
	Proportion of people who know how to manage their chronic condition(s) (if have chronic conditions)	52	Collapse “No” and “In-between, or some conditions”
Access	Proportion of people who have transportation when they want to do things outside of their home (non-medical)	53	Collapse “No” and “Sometimes”
	Proportion of people who have transportation to get to medical appointments when they need to	54	Collapse “No” and “Sometimes”
	Proportion of people who receive information about their services in the language they prefer (if non-English)	55	Collapse “No” and “Some information”

Domain	Item	Table #	Collapsing Logic
	Proportion of people who need grab bars in the bathroom or elsewhere in their home but do not have them	56	Collapse “Has one, but needs upgrade”, “Has one and doesn’t need upgrade”, and “Doesn’t need”
	Proportion of people who need bathroom modifications (other than grab bars) but do not have them	57	Collapse “Has one, but needs upgrade”, “Has one and doesn’t need upgrade”, and “Doesn’t need”
	Proportion of people who need a specialized bed but do not have it	58	Collapse “Has one, but needs upgrade”, “Has one and doesn’t need upgrade”, and “Doesn’t need”
	Proportion of people who need a ramp or stair lift in or outside their home but do not have it	59	Collapse “Has one, but needs upgrade”, “Has one and doesn’t need upgrade”, and “Doesn’t need”
	Proportion of people who need a remote monitoring system but do not have it	60	Collapse “Has one, but needs upgrade”, “Has one and doesn’t need upgrade”, and “Doesn’t need”
	Proportion of people who need a personal emergency response system but do not have it	61	Collapse “Has one, but needs upgrade”, “Has one and doesn’t need upgrade”, and “Doesn’t need”
	Proportion of people who need some other home modification but do not have it	62	Collapse “Has one, but needs upgrade”, “Has one and doesn’t need upgrade”, and “Doesn’t need”
	Proportion of people who need a walker but do not have it	63	Collapse “Has one, but needs upgrade”, “Has one and doesn’t need upgrade”, and “Doesn’t need”
	Proportion of people who need a scooter but do not have it	64	Collapse “Has one, but needs upgrade”, “Has one and doesn’t need upgrade”, and “Doesn’t need”
	Proportion of people who need a wheelchair but do not have it	65	Collapse “Has one, but needs upgrade”, “Has one and doesn’t need upgrade”, and “Doesn’t need”

Domain	Item	Table #	Collapsing Logic
	Proportion of people who need hearing aids but do not have them	66	Collapse “Has one, but needs upgrade”, “Has one and doesn’t need upgrade”, and “Doesn’t need”
	Proportion of people who need glasses but do not have them	67	Collapse “Has one, but needs upgrade”, “Has one and doesn’t need upgrade”, and “Doesn’t need”
	Proportion of people who need a CPAP machine but don’t have it	68	Collapse “Has one, but needs upgrade”, “Has one and doesn’t need upgrade”, and “Doesn’t need”
	Proportion of people who need some other assistive device but do not have it	69	Collapse “Has one, but needs upgrade”, “Has one and doesn’t need upgrade”, and “Doesn’t need”
Safety	Proportion of people with concerns about falling or being unstable	74	Collapse “Yes, often” and “Sometimes”
Health Care	Proportion of people who can get an appointment to see their primary care doctor when they need to	80	Collapse “Usually” and “No, rarely”
Wellness	Proportion of people who health was described as poor	88	Collapse “Excellent”, “Very good”, “Good” and “Fair”
	Proportion of people whose health was described as having gotten better compared to 12 months ago	89	Collapse “Much better” and “Somewhat better”; Collapse “Much worse”, “Somewhat worse” and “About the same”
	Proportion of people who often feel sad or depressed	93	Collapse “Never, or almost never”, “Not often”, and “Sometimes”
	Proportion of people whose hearing was described as poor	95	Collapse “Good” and “Fair”
	Proportion of people whose vision was described as poor	96	Collapse “Good” and “Fair”
Medications	Proportion of people who understand what they take their prescription medications for (if take prescription medications)	99	Collapse “No” and “In-between, or some medications”
Rights and Respect	Proportion of people whose paid support staff treat them with respect	100	Collapse “No, never or rarely” and “Some, or usually”

Domain	Item	Table #	Collapsing Logic
	Proportion of people whose permission gets asked before others enter their home/room (if in group setting)	101	Collapse “Sometimes, rarely or never” and “Usually, but not always”
	Proportion of people who have enough privacy where they live (if in group setting)	103	Collapse “Sometimes, rarely or never” and “Usually, but not always”
	Proportion of people who can use the phone privately whenever they want to (if in group setting)	105	Collapse “No, never or rarely” and “Usually”
Self-Direction of Care	Proportion of people who can choose or change what kind of services they get	109	Collapse “No” and “Sometimes, or some services”
	Proportion of people who can choose or change how often and when they get services	110	Collapse “No” and “Sometimes, or some services”
	Proportion of people who can change their paid support staff if they want to	111	Collapse “No” and “Sometimes, or some”
Work	Proportion of people who would like a job (if not currently employed)	113	Collapse “Yes” and “Maybe, not sure”
	Proportion of people who would like to do volunteer work (if not currently volunteering)	115	Collapse “Yes” and “Maybe, not sure”
Everyday Living	Proportion of people who generally need at least some assistance with everyday activities (such as preparing meals, housework, shopping or taking their medications)	117	Collapse “A lot” and “Some”
	Proportion of people who generally need at least some assistance with self-care (such as bathing, dressing, going to the bathroom, eating, or moving around their home)	119	Collapse “A lot” and “Some”
	Proportion of people who have access to healthy foods when they want them	121	Collapse “No, never” and “Sometimes”
Affordability	Proportion of people who ever have to skip a meal due to financial worries	122	Collapse “Yes, often” and “Sometimes”
Control	Proportion of people who feel in control of their lives	123	Collapse “Yes, almost always, always” and “In-between, sometimes”
